Company Equipment & Asset Policy

Document ID: POL-EQP-001
Effective Date: 2024-02-01
Version: 1.2
Owner: IT Team

Covers standard equipment by role, requesting additional gear, care and loss/theft handling, and return requirements.

SECTION 1: Purpose and Scope

This policy governs the issuance, use, and return of physical equipment and software licenses provided by Solara Dynamics to employees and contractors, so that company assets are tracked consistently and returned or replaced appropriately.

SECTION 2: Standard Equipment Issued by Role

All employees receive a company laptop (choice of MacBook Pro or Lenovo ThinkPad), a laptop lock, and standard peripherals. Remote and hybrid employees additionally receive an external monitor, keyboard, and mouse, shipped to their home address. Engineering and Data roles may request an upgraded laptop configuration (additional memory or storage) through their manager if their work requires it.

SECTION 3: Requesting Additional Equipment

Additional equipment beyond the standard issue (a second monitor, headset, ergonomic accessories) can be requested through the Solara IT Helpdesk with manager approval. Requests are typically fulfilled within 5 business days for domestic addresses; international shipments for approved EOR employees may take longer due to customs processing.

SECTION 4: Ownership and Care of Equipment

All issued equipment remains the property of Solara Dynamics. Employees are expected to take reasonable care of equipment, keep operating systems and security software up to date when prompted, and avoid installing unauthorized software that could compromise device security, consistent with the Information Security & Data Protection Policy (POL-SEC-001).

SECTION 5: Loss, Theft, and Damage

Lost, stolen, or damaged equipment must be reported to the Solara IT Helpdesk and, if security-related, to IT Security per the Information Security & Data Protection Policy (POL-SEC-001), within 24 hours of discovery. Equipment lost or damaged due to normal wear and tear is replaced at no cost to the employee; equipment lost or damaged due to gross negligence may result in the employee being charged the depreciated replacement cost.

SECTION 6: Personal Use of Company Equipment

Limited personal use of company equipment is permitted consistent with the Acceptable Use section of the Information Security & Data Protection Policy (POL-SEC-001). Company equipment may not be used to run a personal business, mine cryptocurrency, or be shared with household members.

SECTION 7: Software and License Compliance

Only software approved by IT may be installed on company equipment. Employees must not install personal copies of licensed software or use company software licenses for non-business purposes. New software requests, including free tools, are submitted through the Solara IT Helpdesk so that IT Security can review them for compatibility and data-handling risk.

SECTION 8: Return of Equipment Upon Departure

All company equipment must be returned within 10 business days of an employee's last day of employment using the prepaid return shipping label provided by IT. Equipment not returned within this window may result in the depreciated value being deducted from final pay to the extent permitted by applicable state law, and the People & Culture Team will follow up directly with the departing employee before any deduction is made.

SECTION 9: Frequently Asked Questions

Can I keep my laptop if I buy it at depreciated value? In some cases yes; contact the Solara IT Helpdesk before your last day to request a buyout quote, which must be approved by IT and Finance before the standard return process is skipped.

What happens if I spill coffee on my keyboard? Report it to the Solara IT Helpdesk right away; accidental damage from normal use is replaced at no cost under Section 5, and prompt reporting helps avoid further damage to the device.

Can I use my personal external monitor instead of the company-issued one? Yes, personal peripherals are allowed, but Solara Dynamics is not responsible for repair or replacement of personally owned equipment.

SECTION 10: Roles and Responsibilities

The IT Team owns equipment provisioning, the approved software catalog, and the return process for departing employees. Employees are responsible for the reasonable care of issued equipment, prompt reporting of loss, theft, or damage, and returning equipment on time when they separate from the company.

Managers are responsible for approving additional equipment requests from their direct reports and for confirming that departing team members understand the equipment return requirement during offboarding conversations.
